

# Languages of the World

Kevin Duh

# Goals of this lecture

1. Appreciate the *diversity* of languages
2. Discuss some important linguistic *phenomenon* and *classifications* may help you with your Natural Language Processing research

# Outline

1. What is a language?
2. Language Change
3. World Tour
4. Language Universals

# What is a language?

- A language is “a product of the collective mind of linguistic groups” -- Ferdinand de Saussure

From: [http://en.wikipedia.org/wiki/File:Ferdinand\\_de\\_Saussure\\_by\\_Jullien.png](http://en.wikipedia.org/wiki/File:Ferdinand_de_Saussure_by_Jullien.png)

- “A language is a dialect with an army and navy” – Max Weinreich
  - E.g. Chinese “dialects”,  
Scandinavian “languages”

From:  
[http://epyc.yivo.org/content/12\\_1.php](http://epyc.yivo.org/content/12_1.php)

# Definition of language in terms of “Mutual Intelligibility”

- Two caveats:
  - **Dialect continuum**: A string of dialects may be mutually intelligible, but not transitive
    - E.g. Dutch-German dialect continuum
  - It’s a **matter of degree**, no clear-cut intelligibility test
- There’s no such thing as “languages”; **“Dialects” are all there is.**
  - One dialect defined as “standard” language
    - E.g. Tokyo dialect as “Japanese”

# Numbers to Know:

## How many languages in the world?

- Conservative estimate: 6000
  - Peak of diversity: 10,000-15,000 (~15,000BCE)
- Skewed distribution

Population range	# of Languages	Percentage of world population
100,000,000+	8	40%
10,000,000-99,999,999	80	39%
1,000,000-9,999,999	305	14%
100,000-999,999	93	4%
10,000-99,999	1,811	0.9%
1,000 -9,999	1,978	0.1%
100-999	1,062	0.007%
1-99	475	0.0002%

Source: Ethnologue - <http://www.ethnologue.com/statistics/status>

# Pause and think about this for a bit

*What I say here can be expressed equivalently in 6000 other ways, using completely different words and grammar!*

# Numbers to know: Largest language by # of speaker

Language	# of L1 Speakers (in millions)
Chinese	1,197
Spanish	414
English	335
Hindi	260
Arabic	237
Portuguese	203
Bengali	193
Russian	167
Japanese	122
Javanese	84

Source: Ethnologue - <http://www.ethnologue.com/statistics/status>

# Numbers to know: When did language arise?

200,000 years ago: Anatomically modern humans

*Language arose here?*

*Or here?*

*And is there a  
Language Instinct?*

50,000 years ago: Behavioral Modernity

*Language enables cooperation & gossip → larger social groups*

12,000 years ago: Agricultural Revolution

*Disclaimer: Dates are inexact. I'm not an expert and there appears to be no definitive answer.*

# Outline

1. What is a language?
2. Language Change
3. World Tour
4. Language Universals

# Change is the cause of diversity

- Change by Natural Evolution
  - Slight differences in speaking (usually due to Laziness) leads to large differences after generations
  - E.g. Sound change, re-bracketing, semantic shift
- Change by Contact (Areal Effect)
  - Borrowing of phonology, lexicon, and grammar from neighboring languages
    - E.g. Balkan Sprachbund: Albanian, Greek, Romanian, Bulgarian, Macedonian
  - verb-Not-verb, post-article, genitive & dative merger

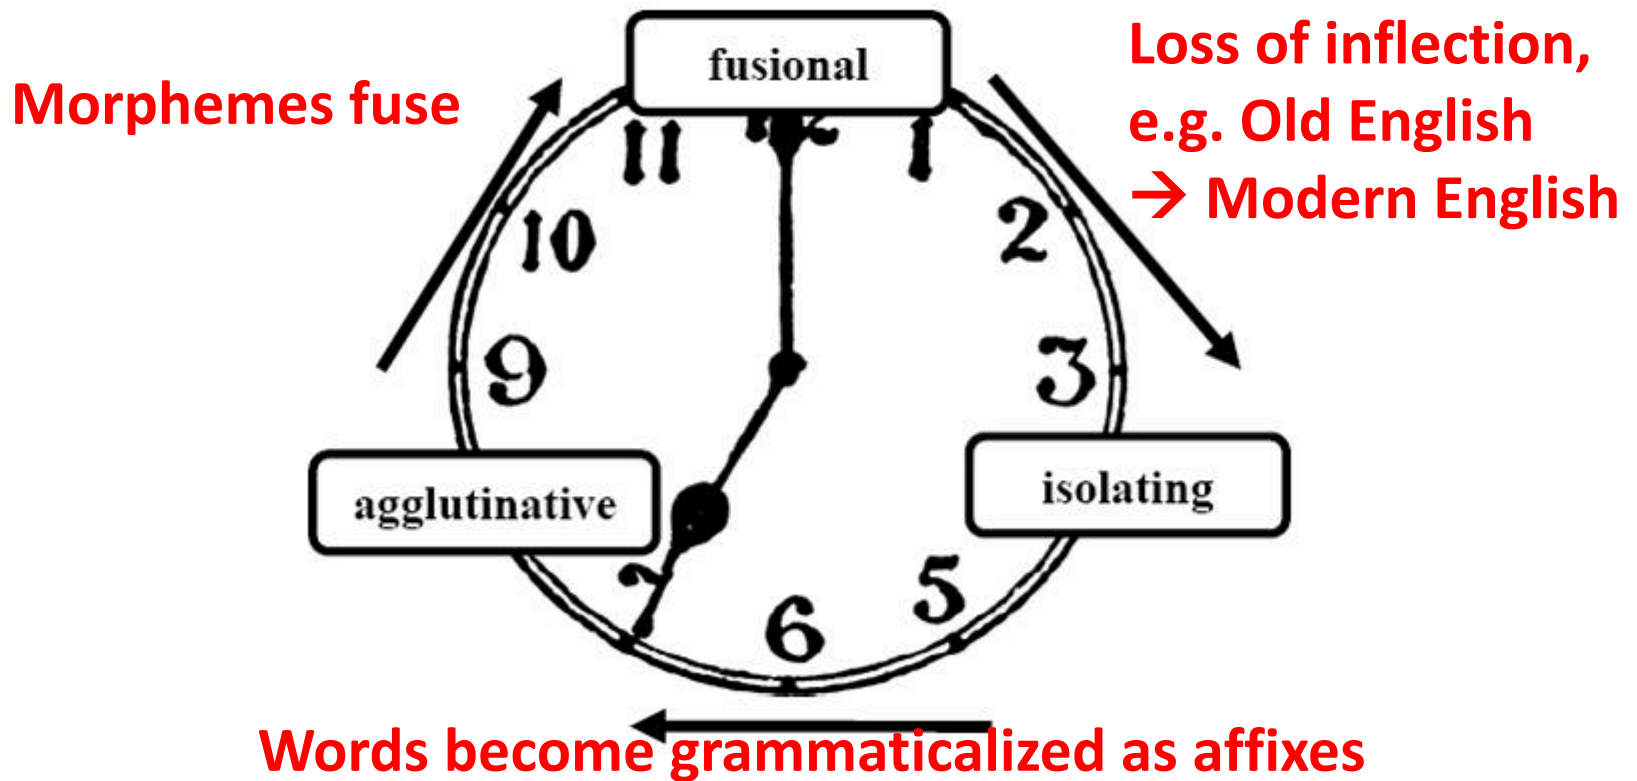

# Sound change

- Principle of least effort, e.g.:
  - “God be with you” → God b’wy → Goodbye
  - Loss of case-endings in Latin → Necessity of word order for grammatical function in English
  - Loss/merger of consonants in Old Chinese → Necessity of Tones
- General change, e.g.:
  - Great Vowel Shift (1350-1700, England)
    - “bite” bi:tə → baɪt; “beet”: be:t → bi:t

# Extension of Grammatical Patterns due to sound change

- Latin had multiple plural rules:
  - sorōr**ēs** “sisters”
  - fēmina → fēmin**ae** “women”
  - dominus → domini**i** “master”
- In French, only one plural ending was left due to sound erosion, so **-s** was extended

# Morphological Type Change

# Outline

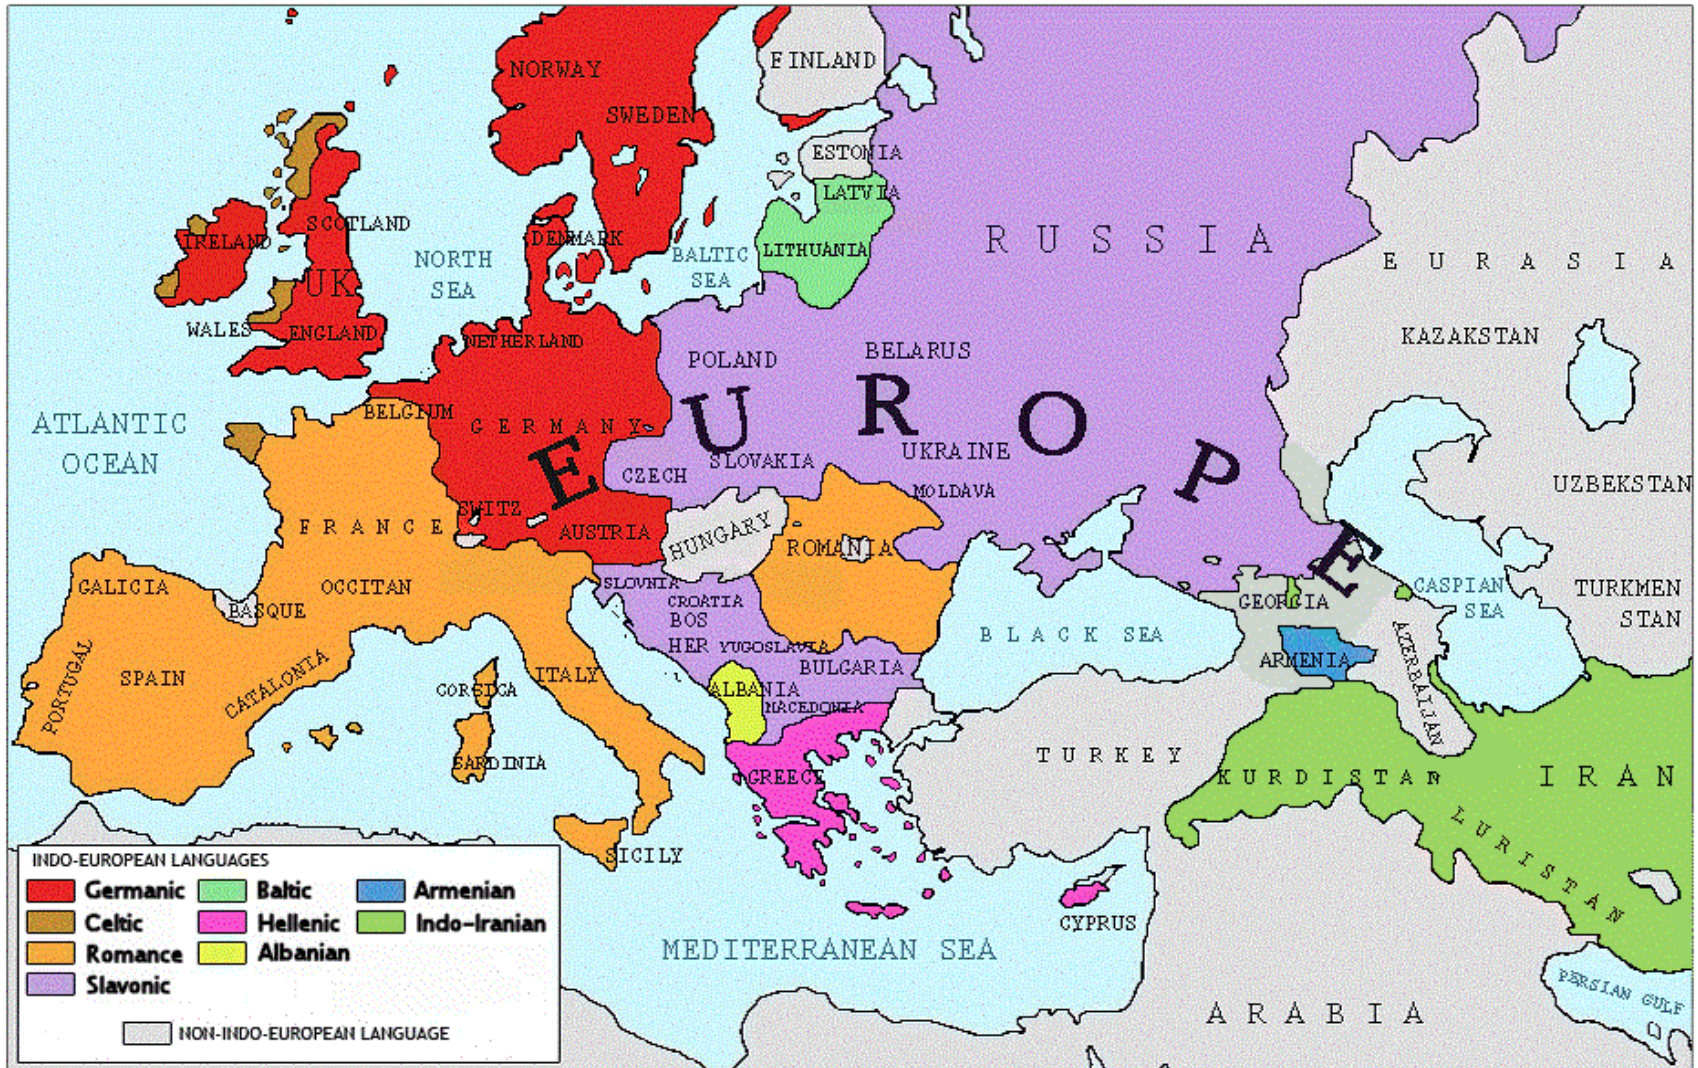

1. What is a language?
2. Language Change
3. World Tour
4. Language Universals

# Our Itinerary

- I'll introduce various language families while we tour the world
  - Note: Don't confuse geographical and genetic classification; e.g. Languages in Eurasia != Indo-European languages
- For each language family, I'll point out some interesting phenomena or trivia
  - Warning 1: These phenomena are by no means unique to the language under discussion. May appear elsewhere.
  - Warning 2: Due to time limitation, not all important phenomena will be discussed. Our tour is 走馬看花 style: “viewing the flowers while riding a fast horse”

# Indo-European Language Family

From: [http://en.wikipedia.org/wiki/Indo-European\\_languages](http://en.wikipedia.org/wiki/Indo-European_languages)

## Indo-European

**Germanic:** English, German, Swedish, etc.

**Armenian:** Armenian

**Balto-Slavic:** Lithuanian, Russian, Polish, Czech, etc.

**Italic:** Italian, French, Spanish, Romanian, etc.

**Albanian:** Albanian

**Celtic:** Gaelic, Scottish

**Hellenic:** Greek

**Indo-Iranian:** Farsi, Hindi, Bengali, Marathi, etc.

# Discovery of the Indo-European Family

	1	2	3
Irish	aon	do	tri
Greek	hen	duo	treis
Latin	unus	duo	tres
Italian	uno	due	tre
French	un	deux	trois
German	einz	zwei	drei
Swedish	en	tva	tre
Russian	odin	dva	tri
Bengali	ek	dvi	tri
Persian	yak	do	se
ProtoIE?	Hoi-no?	duwo ?	trei?
Turkish	bir	iki	üc
Hebrew	'exad	šnaim	šlosa

1796: Sir William Jones noticed similarity between Sanskrit & Latin

From: [http://en.wikipedia.org/wiki/William\\_Jones\\_\(philologist\)](http://en.wikipedia.org/wiki/William_Jones_(philologist))

## Comparative Reconstruction:

- Cognates from basic vocabulary (body parts, kinship, nature)
- Identify patterns of sound change & correspondence

# Finno-Ugric Family:

## Finnish, Hungarian, Estonian, etc.

Geographic discontinuity is interesting:

- Urals: probable homeland
- Finnic branch was larger but encroachment by Slavic
- Hungarian branch due to Magyar migration (800CE)

FINNO-UGRIC						
FINNIC			UGRIC			
A. Baltic-Finnic:	Veps	3	Udmurt		A. Hungarian	
Finnish	Votic	4	D. Mari		B. Ob-Ugric:	
Ingrian	1	B. Sami	E. Mordvin		Mansi	
Karelian	1	C. Permic:			Khanty	
Estonian	2	Permyak				
Livonian	2	Komi				

From: <http://finno-ugric.com>

# Finno-Ugric: Agglutinative Morphology

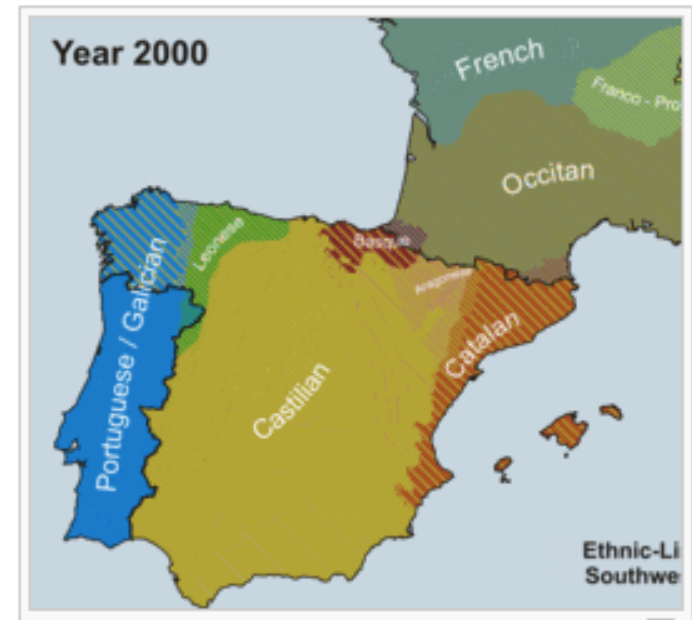

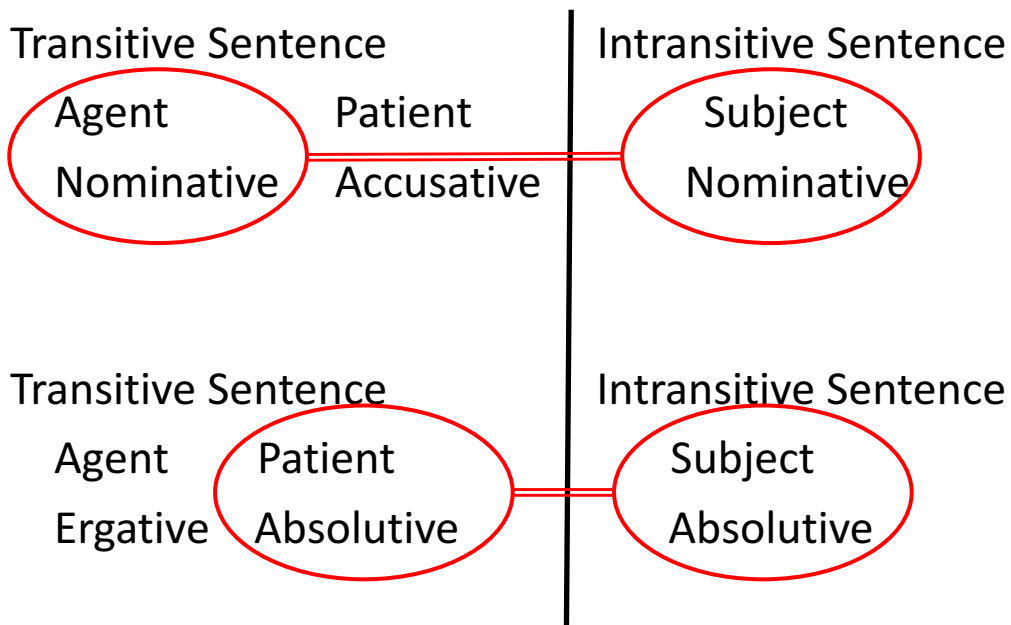

14 cases in Estonian, 15 cases in Finnish, 21 cases in Hungarian:

*Note: many of these are encoded by prepositions in Indo-European languages (average 6 cases)*

Case	Hungarian Word	Gloss
Nominative	hajó	ship [subject]
Accusative	hajó-t	ship [object]
Inessive	hajó-ban	in a ship
Elative	hajó-ból	out of a ship
Illative	hajó-ba	into a ship
Superessive	hajó-n	on a ship
Delative	hajó-ról	about a ship
Sublative	hajó-ra	onto a ship
Adessive	hajó-nál	by a ship
Ablative	hajó-tól	from a ship
...		

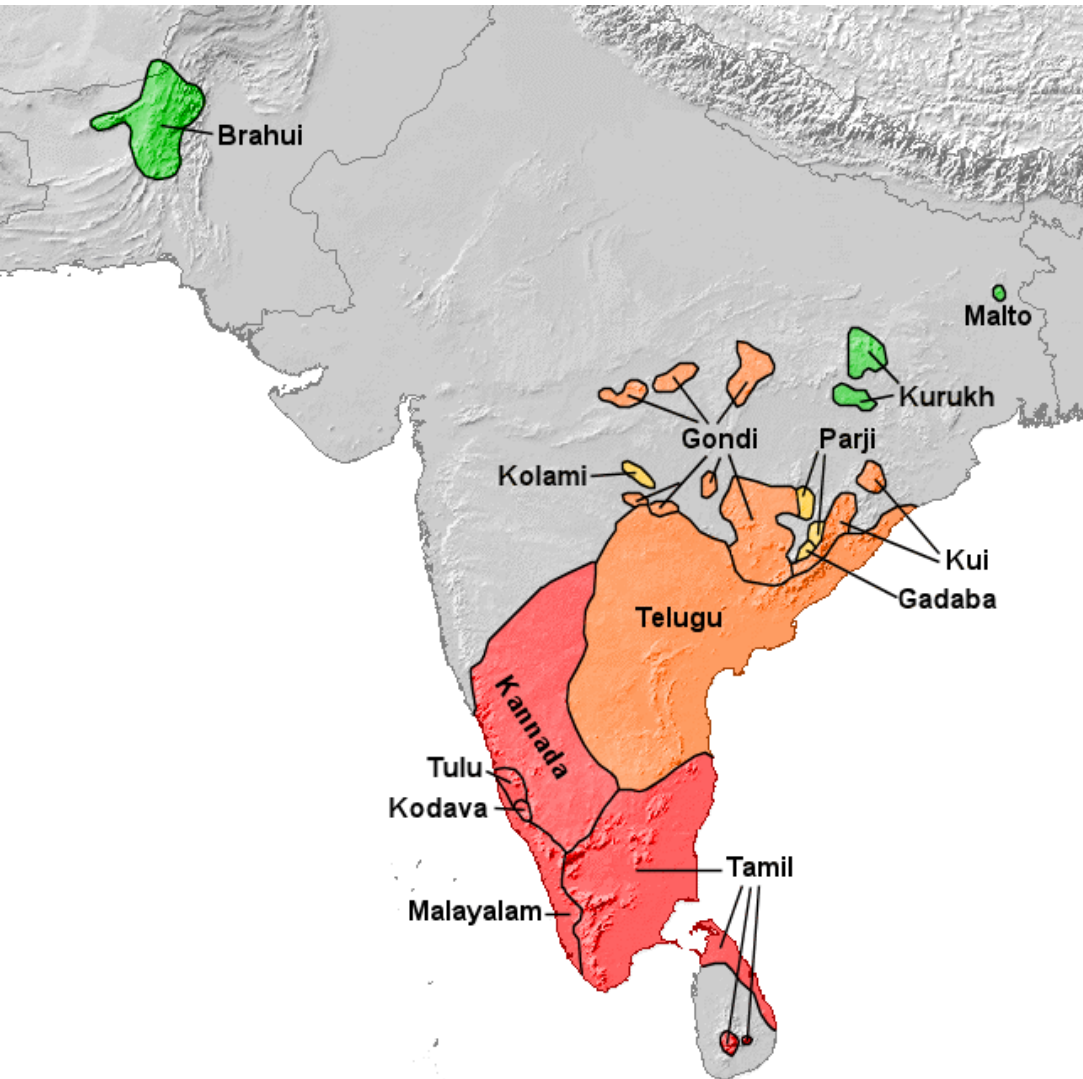

# Basque

- Unrelated to any other language?
- Ergative-absolutive case system

From: [http://en.wikipedia.org/wiki/Basque\\_language](http://en.wikipedia.org/wiki/Basque_language)

# Dravidian Language Family

Distinct from Indo-European in northern India

## Some Characteristics:

- Rigid SOV word order
- Nouns gender: “rational” (refers to human, deity) vs. “irrational” (refers to children, animal, objects)

# Languages of the Caucasus region

*Many different language families in this small area!*

Trivia: Chechen has 40-60 consonants, ~44 vowels

# Altaic Language Family (?)

- Macro-family consisting of possibly Turkic, Mongolic, Tungustic
  - Korean & Japanese?
  - Similarities due to genetics or contact?

From: [http://en.wikipedia.org/wiki/Altaic\\_languages](http://en.wikipedia.org/wiki/Altaic_languages)

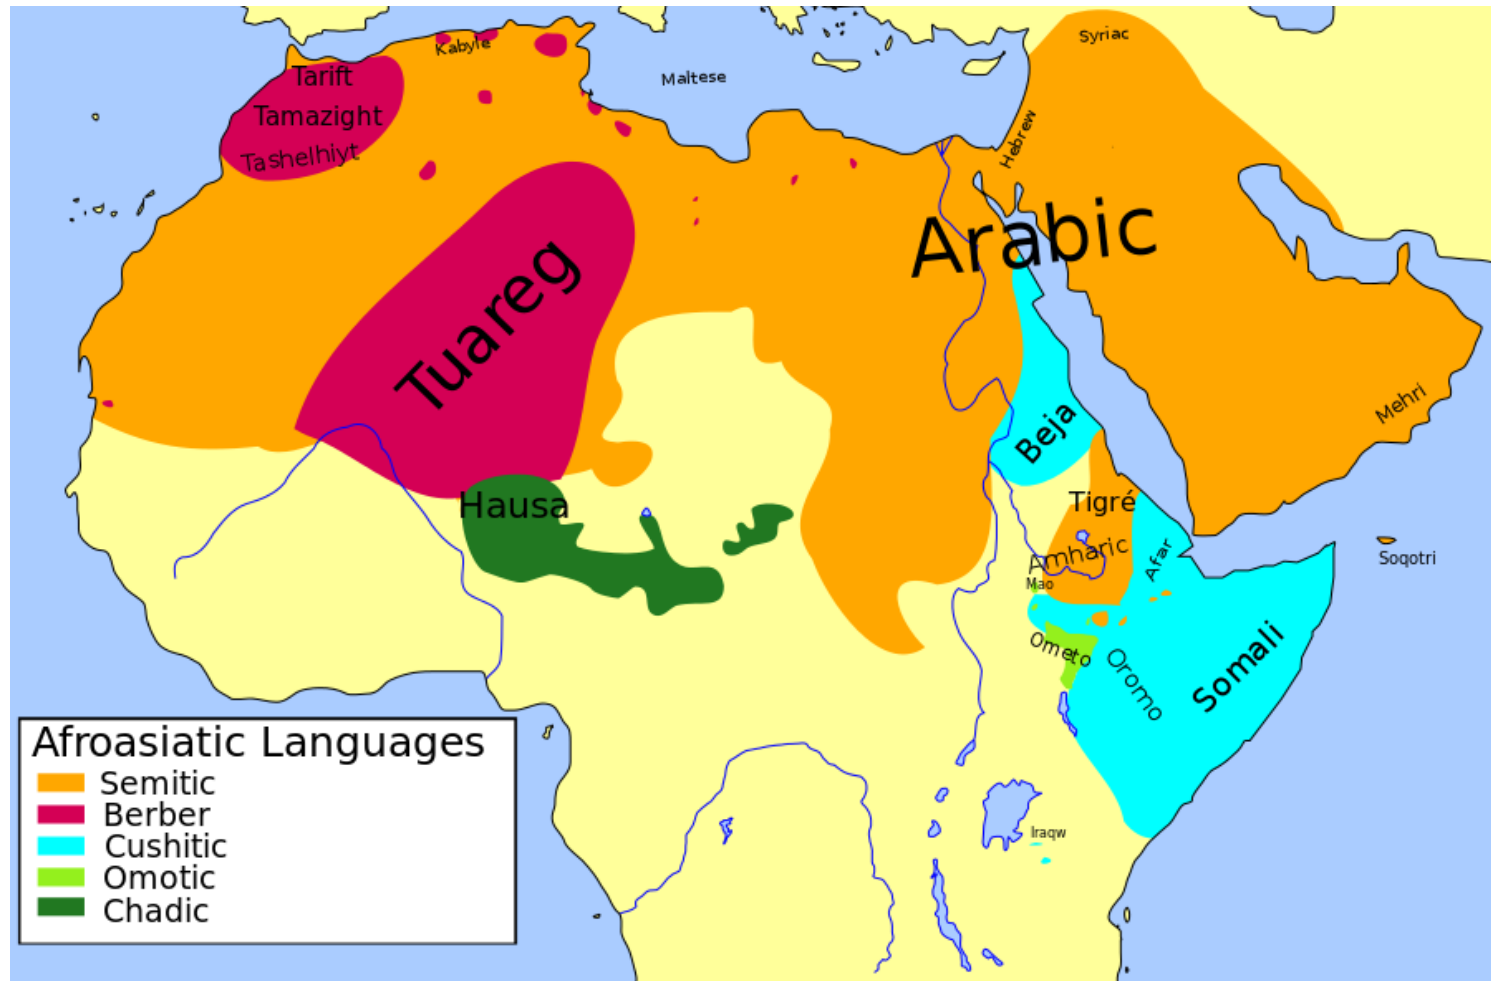

# Vowel Harmony in Turkic

- Turkic: Turkish, Uzbek, Kazakh, Dolgan, etc.
- Vowel Harmony:
  - long-distance assimilation where vowels become similar across intervening consonants in some way
  - E.g. back/front & rounded/unrounded harmonization in Turkish:

Türkiye'**dir** “it is Turkey”  
kapı**dır** “it is the door”  
gün**dür** “it is the day”  
palt**o****dur** “it is the coat”

# Semitic Language Family:

Hebrew, Arabic dialects, Aramaic, Amharic, etc.

# Non-concatenative morphology in Semitic (e.g. Arabic)

- Root: 2-4 consonant; Template: vowels in-between
- ktb "write" (as verb)
  - **ti-ktib "she writes"**  
(prefix ti- means "she", present form is "- - i -")
  - **katab-it "she wrote"**  
(suffix -it means "she", past form is "- a - a -")
  - **kaatib "writing"**  
(present participle "- aa - i -")
  - **ma-ktuub "written"**  
(past participle "- - uu -")
- ktb "book" (as noun)
  - **kitaab**: (- i - aa – singular)
  - **kutub**: (- u - u – plural)

# Languages in Sub-Saharan Africa

- Nilo-Saharan
- Niger-Congo
- Khoisan

## Characteristics:

- Many are tonal, have large sound inventories and “exotic” sounds, e.g. implosives, clicks
- Large noun classes (Shona: 20)

# Sino-Tibetan Language Family

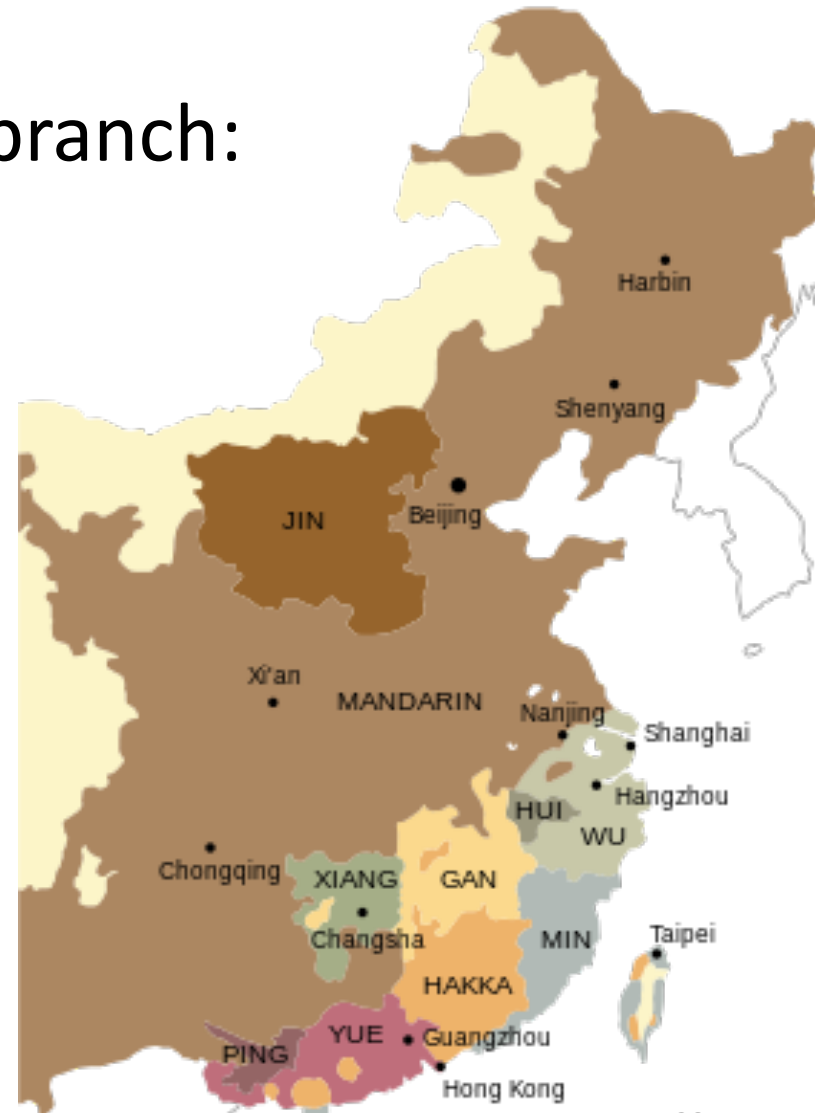

Tibetan branch:

- e.g. Tibetan, Burmese

Sinitic branch:

Characteristics:

- Tone
- Isolating morphology
- Noun Classifiers
  - numeral-classifier-noun in Mandarin
  - noun-numeral-classifier in Burmese

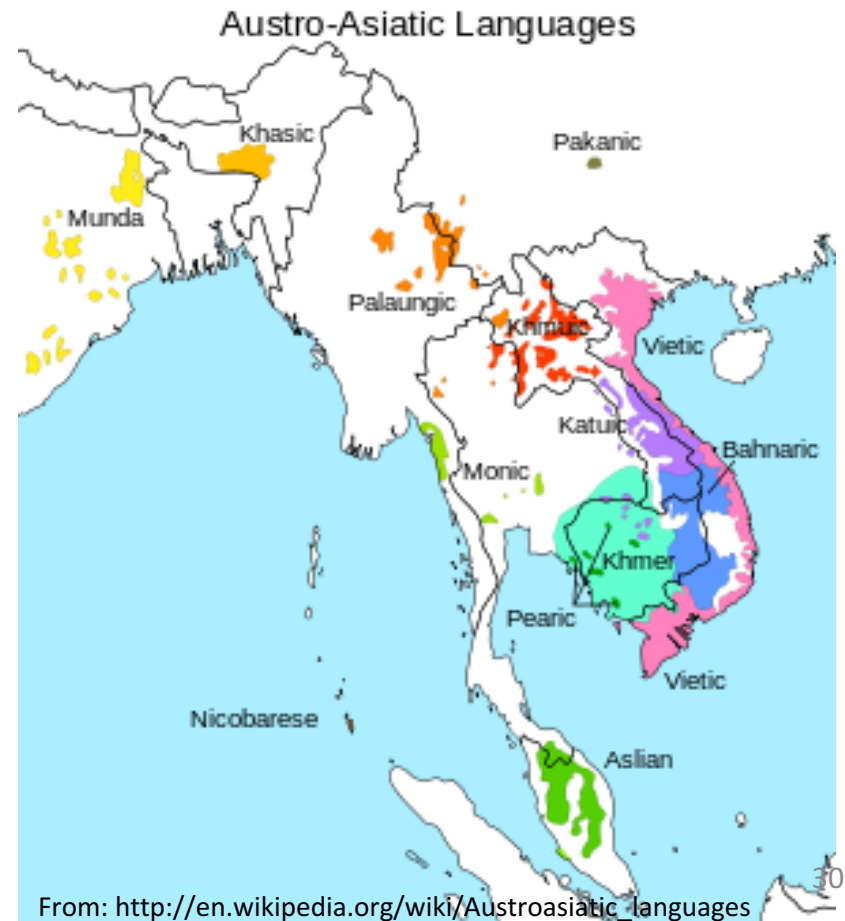

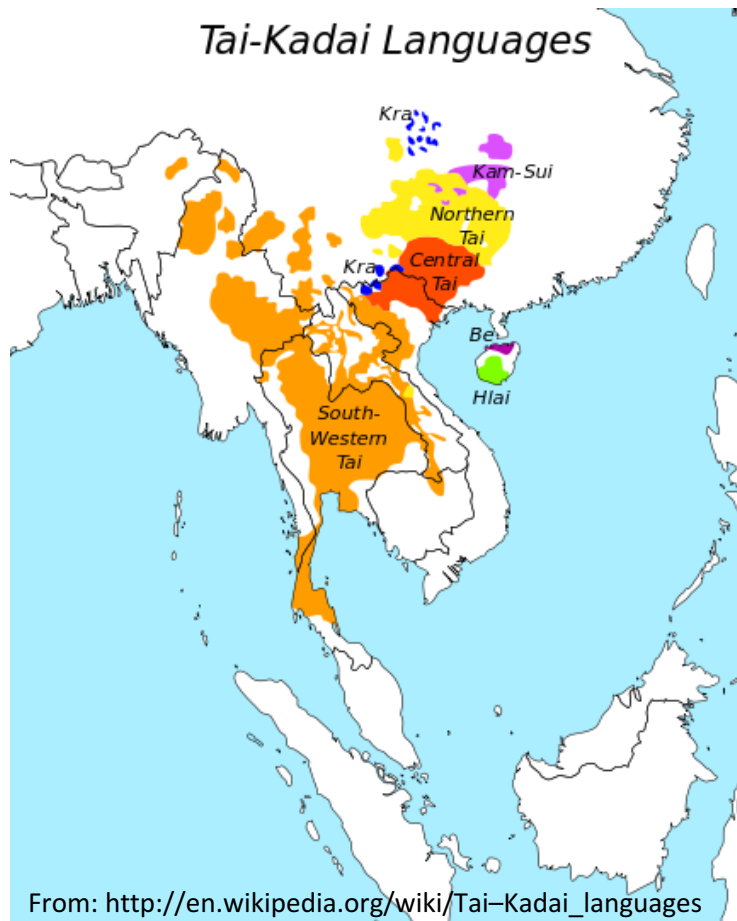

# Tai-Kadai Family

e.g. Thai – tone (5), isolating,  
noun classifier

# Austro-Asiatic Family

e.g. Vietnamese – tone (6), isolating,  
noun classifier, 30% vocab via Chinese  
e.g. Munda – no tone, agglutinative

*Likely areal effects*

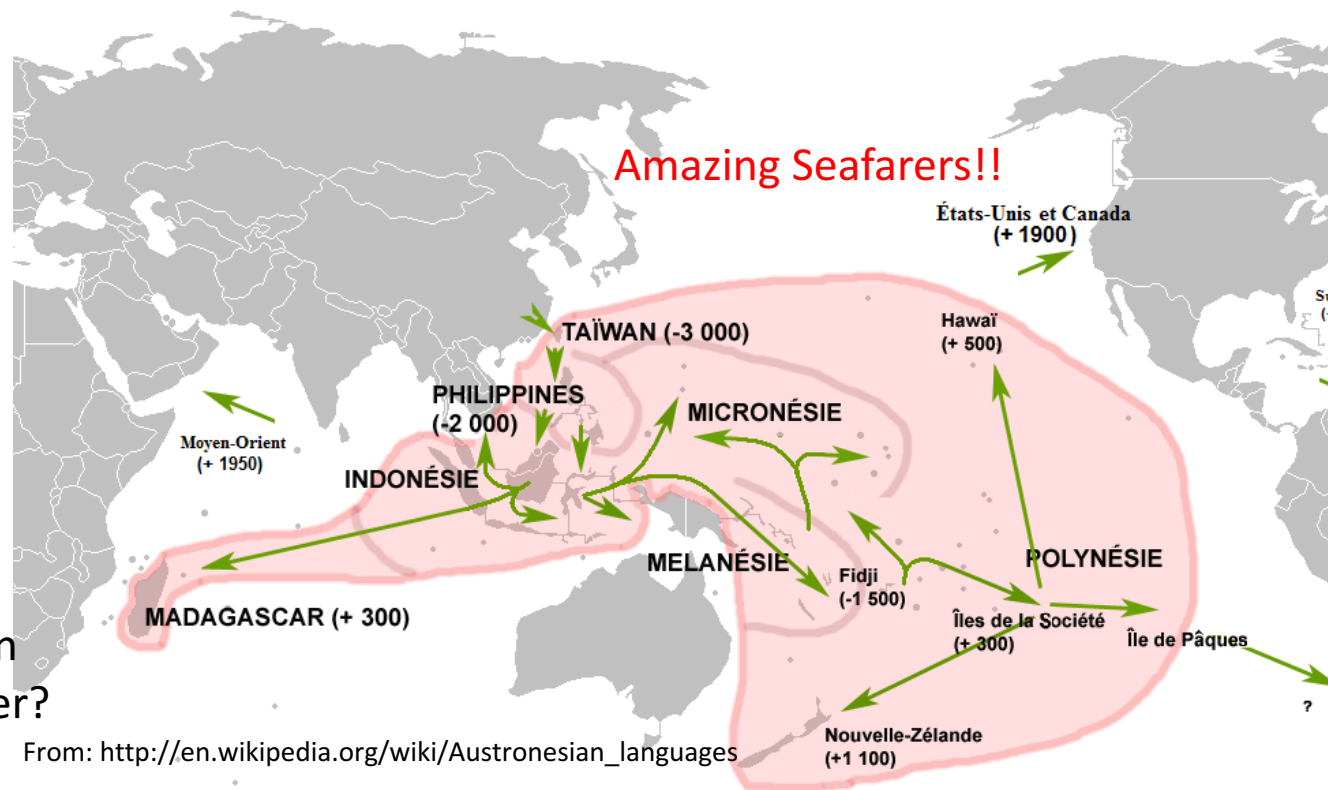

# Austronesian Languages

- Formosan branch: ~20 languages in Taiwan (many endangered)
- Malayo-Polynesian branch:
  - West: Javanese, Sundanese, Malay, Indonesian, Tagalog, Malagasy, etc.
  - East: Hawaiian, Maori, Fijian, etc.

## Characteristics:

- Ergative-Absolutive
- Agglutinative morphology
- Small sound inventory:  
(13 phoneme in Hawaiian)
- Some have VOS, VSO order
- Inclusive/Exclusive 1<sup>st</sup> person pronoun: “we” includes hearer?
- Reduplication

# Reduplication

Sound repetition within a word for semantic or grammatical purpose

e.g. Tagalog:

sulat “write” → **s**ulat “will write”

hanap “seek” → **h**anap “will seek”

lakad “walk” → **l**alakad “will walk”

e.g. Indonesian:

anak “child” → **anak** anak “all sorts of children”

oraN “man” → **oraN** oraN “all sorts of men”

## Languages in Papua New Guinea:

- 800+ languages! (1 language per 200-900km<sup>2</sup>)
- Diversity due to mountains (natural barriers) and tribal society (cultural barriers)
- **Tok Pisin** (one of the official languages):
  - Pidgin arose from contact between English & locals
  - Pidgin becomes creole when children learn it as L1
  - Lexicon is mostly from English. Syntax is from where?

## Languages in Australia:

- 270 languages, many near extinction
- **Trivia - Noun classes in Dyirbal:**
  - I: masculine & animate; II: feminine, fire, fighting;
  - III: all trees with edible fruit; IV: everything else

George Lakoff

Women,  
Fire, and  
Dangerous  
Things

*What Categories Reveal  
about the Mind*

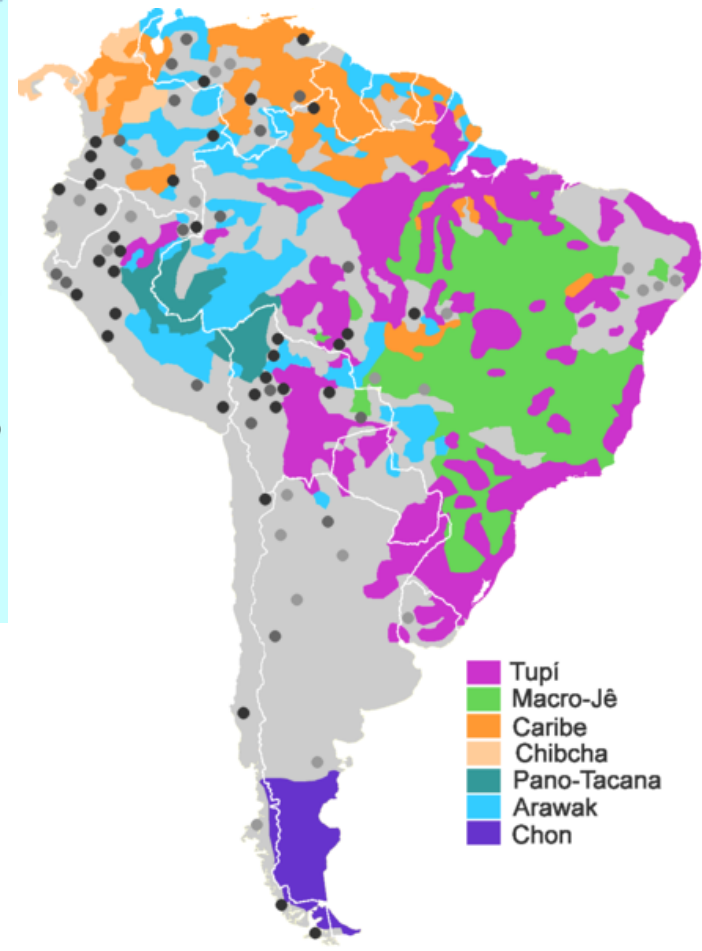

# Languages of America

(there are attempts to group them into macro-families, but controversial)

Year 2000. Source: CDI-Conapo

# Some Interesting Phenomena

- Multiple Argument Agreement in Mohawk:
  - Verb not only agrees with subject but also object
    - E.g. **shako-** prefix: agreement w/ 3<sup>rd</sup> person subject and 3<sup>rd</sup> person object; **ra-**: agreement with just 3<sup>rd</sup> person subject
  - Noun incorporation: noun root becomes part of the verb, and one less argument to agree with:
    - 3 words: **Wa'-k-hniui-** (1sg-subj-BUY) **ne** (part) **ka-nakt-a'** (prefix-BED-suffix) → 1 word: **Wa'-ke-nakta-hninu-**.
- Three-way case marking in Nez Perce:
  - Subjects of intransitives, subjects of transitives, objects of transitives → all get different case
- OVS word order in Carib
- Evidential marker in Makah

# Outline

1. What is a language?
2. Language Change
3. World Tour
4. Language Universals

# Linguistic Universals and Typology

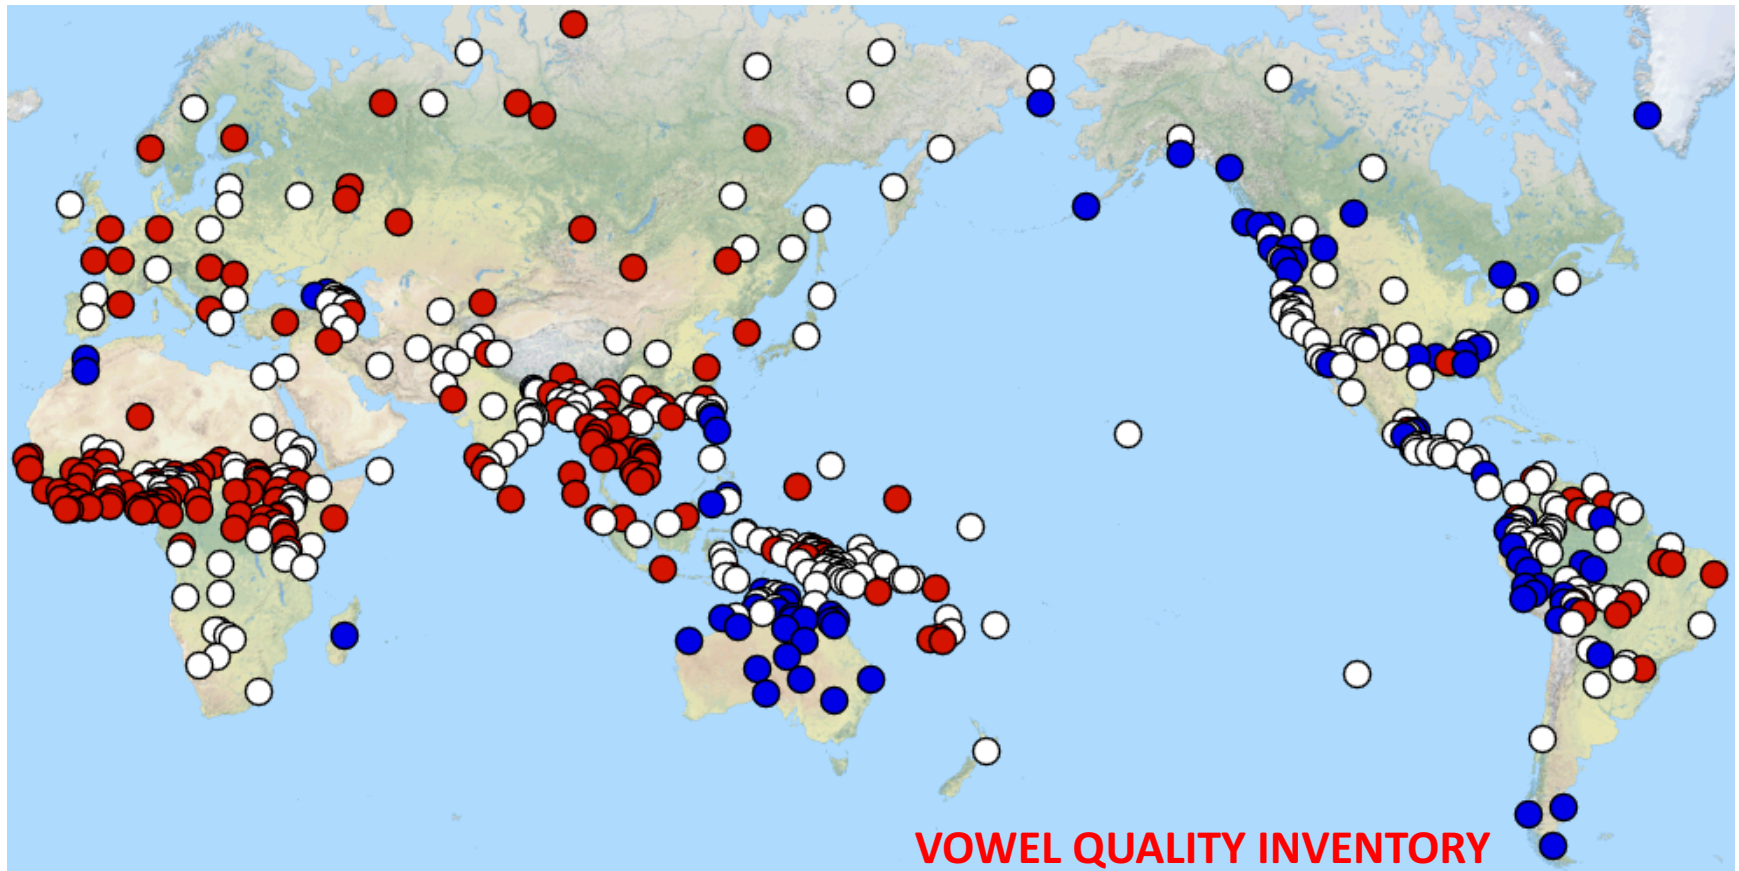

- Typology: classifies language and aims to describe common properties and diversity
- E.g.: The following Word Orders are common.
  - **SOV**: Japanese, Tamil, Turkish (565 languages in wals.info)
  - **SVO**: Chinese, English, Fula (488 languages in wals.info)
  - **VSO**: Arabic, Tongan, Welsh (95 languages in wals.info)
- Why so few **VOS, OVS, OSV** (total <5%)?
  - Hypothesis: Subjects tend to precede Objects
    - Why? Maybe: Agent before Patient = better info flow
  - Note: some languages have V2 or no dominant order

# Typological Generalizations

- SOV tendencies:
  - have postpositions
  - genitive-noun, etc.
- Analytical morphology tendencies:
  - mono-syllable words
  - use of tones
  - use of function words
  - relative fixed word order
- SVO tendencies:
  - have prepositions
  - noun-genitive, etc.
- Synthetic morphology tendencies:
  - poly-syllable words
  - no use of tones
  - fewer function words
  - relative free word order
